Introduction

What does it do?

– Overview; This extension extract the weather info of National Weather Service Internet Weather Source (http://weather.noaa.gov/) and put it on your typo3 site.

Note: Too can extract info from Yahoo Weather (http://weather.yahoo.com) but use it under your responsibility, because this source not is public.

Screenshots

– Some examples of [Gobernalia] Weather Information in action:

Users manual

– Install the extension

– Configure the constants if u need a diferent measures of km and celsius, take a look at Constant Editor of your template.

Eg.:

    plugin.tx_gbweather.temperature = f
    plugin.tx_gbweather.distance = mi

– Go to this extension and edit "template.tmpl" with your html, you must use the tags:

###CITY###	The name of the city for this temperatures
###COUNTRY###	The name of the country
###LOCATION###	Extra information about the location of the weather station
###NOW###	Actual temperature
###MAX###	Max Temperature of the day
###MIN###	Min Temperature of the day
