Introduction

What does it do?

This extension implements the really cool gallery called SmoothGallery by JonDesign. Look at it here:

<http://smoothgallery.jondesign.net/showcase/gallery/>

The extensions works as a gallery and as a slideshow which can either show automatically the next image (after a changeable amount of time) or the user can switch to the next and previous image. These two settings can also be combined. Lightbox is included too (as slimbox).

The extensions works in many different ways

- Images out of a directory: So just add the path to a directory in the flexforms and you are done.
- Images from records: Create a record for every image and save the page as starting point.
- Images inside "text with image": Present the images of a normal content element with rgSmoothGallery.
- Images out of DAM: Select the records and you are done.
- Images out of DAM categories: Select a DAM category to display the images.
- Integration into tt_news: Present the images of the record in LISTLATEST or SINGLE-View.

More features are

- Images can be cropped
- Limitation of images

- Watermarks
- Timed slideshows to change images after a given time
- Thumbnails in another div

Screenshots

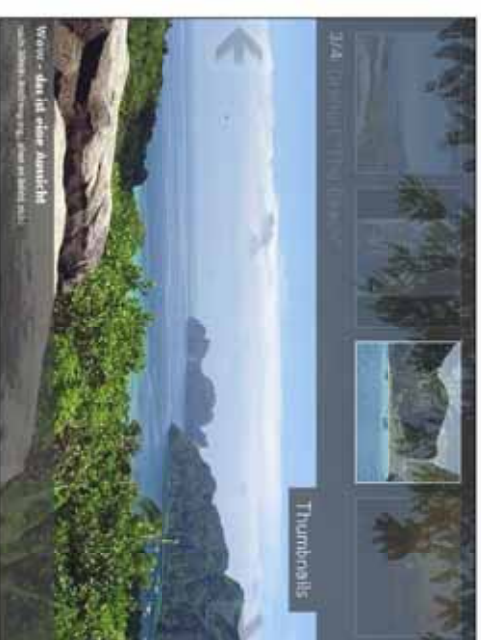

Image 1: The extension showing the thumbnails to browse to the other image

Image 2: The extension inside a content element "text with image", replacing the usual images with the gallery or slideshow. Also a caption is available. Still fully configurable!

Image 3: This is a cropped version of the same original source as in Image 1. Take a look at the section "Advanced configuration" to see how it is done.

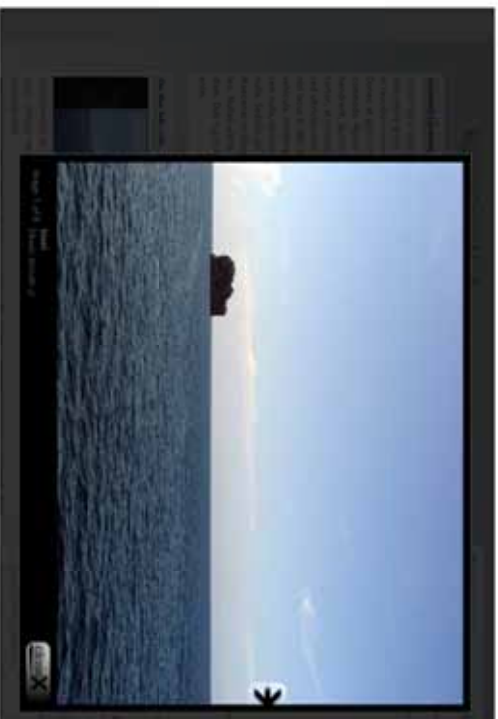

Image 4: An opened image with lightbox and the possibility to switch to the next and previous image

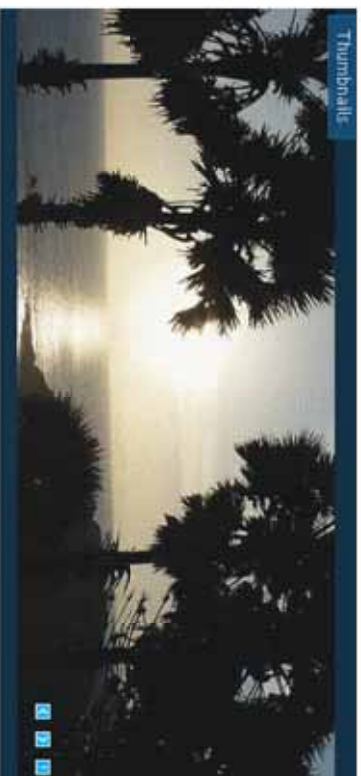

Image 5: Modified CSS files to get a different output, take a look at the section "Alternative layout & Design"

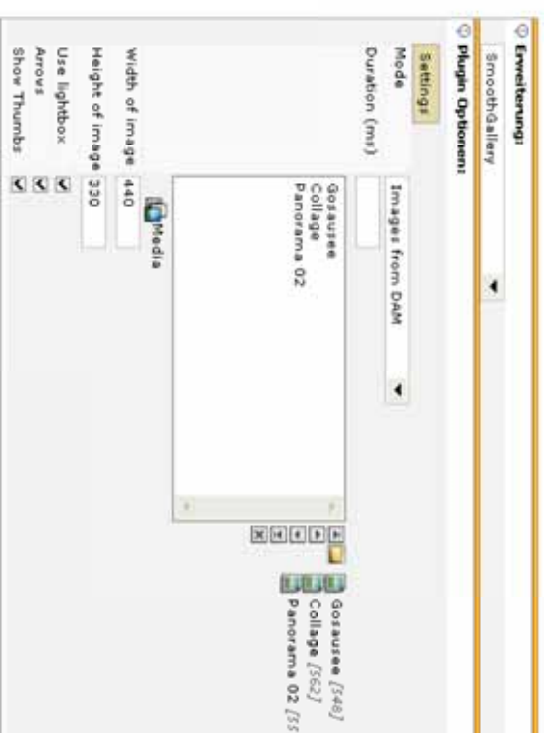

Image 6: The flexform settings in the backend. It is very easy. Just select the mode and you are nearly done (DAM is just selectable if it is installed).

Live-Demo & Examples

See the extension with all the features in action at my website:

- In English: <http://www.rgspeedlemap.com/extend/rgsmoothgallery.html>
- In German: <http://www.rgspeedlemap.com/extend/rgsmoothgallery.html>

Visit all the examples which are linked at the bottom right like the extension working together with the element "Text with image".

- In English: <http://www.rgspeedlemap.com/extend/rgsmoothgallery-in-text-with-image.html>
- In German: <http://www.rgspeedlemap.com/extend/rgsmoothgallery-in-text-mit-bild.html>

Sponsoring

I would like the following sponsors for supporting me and my work.

- Die Apothekegenossenschaft <http://www.nowada.de>

Upgrade from v 1.0.6

If you want to upgrade from 1.0.6, you need to consider 2 major changes:

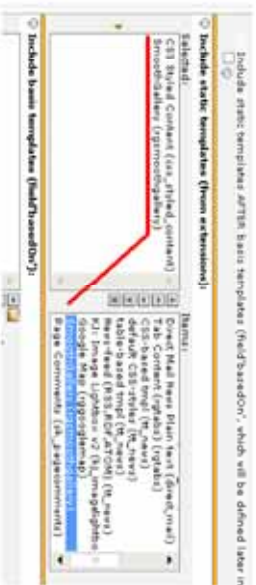

1. The flexforms positions changed a little bit and so you need to update the content element one time. Just open it and press save again.
2. Because of some changes in the javascript files I introduced the version number as a suffix to the file names of `jd.gallery.js` and `slightbox.js`. So if you changed something there, take a look at the originals.

Users manual

Getting started is very easy!

1. Import/Download the extension and install it like every other extension.
2. Include the static TS (from extension) in the template record (your root TS or make an ext. template just for the page where you want the SmoothGallery be displayed).
The steps for the real beginners are:

1. Select your root/first page.
2. Click in the menu on the left side "Template" and choose "Edit whole record".
3. Scroll down until you see the same thing as in the screenshot shown.
4. Search for the "SmoothGallery" entry on the right side, click on it to get it on the left side.
5. Press "Save" and you are done.

3. Configure the extension using the flexform settings - See the exact steps below (it's still very easy)

Images from a directory

To show all images from a directory you need to do the following steps:

1. Follow the steps 1-2 from before
2. Add the relative path to the directory where the images are and **don't forget the / at the end!** The path looks like `fileadmin/myimages/day1/`
3. Add titles and descriptions to the images if you want. One line = One image. Title & description are separated with the | (pipe). So it looks like

```

      title 1 | Text 1
      title 2 | Text 2
      title 4
      title 5 | Text 5
      
```

Important & nice-to-have: If the extension `rgfoldersselector` is installed, you get a very nice wizard to select the folder (No mistyping and checking the path with FTP tools/extensions anymore).

Images from records

To show images from records you need to create first of all some records. Select a page or systfolder and create a record "SmoothGallery Image" and add there a title, description and an image. Then follow these steps:

1. Follow the steps 1-2 from before
2. Add the plugin somewhere to the page and select "images from records" in the dropdown in the flexforms.
3. Add the page/systfolder where you saved your records to the starting point.

Images from tt_content

This just works with `css_styled_content`.

To show the SmoothGallery inside a content element, follow these steps:

1. Follow the steps 1-2 from before.
2. Create a content element "Text with Image" and fill it with text and images.
3. Activate the checkbox "Activate SmoothGallery".

Please take also a look into the [chapter Configuration -> images from tt_content!](#)

Images from DAM

The extension handles also records from DAM. To show images from DAM follow these steps:

1. Follow the steps 1-2 from before.
2. Add the plugin somewhere to the page and select "images from DAM" in the dropdown in the flexform.
3. Select the images you want to display.

Images from DAM Category

Using the DAM category selector works as "images from DAM" - just select "images from DAM (categories)" instead

Integration into tt_news

Follow the first steps 1-2 from before and you are done. The rest of the configuration is done with TS and is described in the section below.

Configuration

Images from tt_content

This section is about the integration of the extension into the content element "Text with Image". To activate the SmoothGallery you need to activate the checkbox "Activate SmoothGallery" inside the content element.

DAM & tt_content

It is not possible to get the images inside a `tt_content` record from DAM. Who has the knowledge to help. Please contact me!

Set the sizes

To change the different sizes follow these steps:

Large Image (in the middle):

Use the width/height field in the content element.

Lightbox

Use the constant editor or Constants

```

TS-CODE
plugin.tx_rgsmoothgallery {
  lightboxwidth = 700
  lightboxheight = 700
}
  
```

Thumbnails

Use the constant editor or Constants

```

TS-CODE
plugin.tx_rgsmoothgallery {
  thumbnailwidth = 700
  thumbnailheight = 700
}
  
```

Usage of title & description

To use the title and description you need to fill the fields "Title Text" for the title and the "Caption" for the description. One line per image.

Configuration of the mode, thumbnails....

To configure the extension inside a content element you need to fill the field "Long Description URL:" with the following code:

```

#mode=1|show=
#showthumbs= true,
#showcarousels= false,
#embedlinks= true,
#lightbox= true
  
```

Explanation:

Name:	Description:	
timed	Is either false or set it to the ms you want as a delay	false
showArrows	Is either true or false. If the arrows should get displayed	true
showCarousel	Is either true or false. If the thumbnails should get displayed	true
embedLinks	Is either true or false. If lightbox should get display	true
lightbox	Should always stay true. To turn off lightbox, use the embedLinks	true

You can also set these settings via the constant editor with

```

TS-CODE
plugin-ts_rgsmoothgallery {
  settings = {tsed: false, showArrows: true, showCarousel: false, embedInHeader: true, lightbox: true
}

```

Example:

If you want a slideshow without arrows which should switch images every 2s, take this into the TS or the field

```

tsed: 2000, showArrows: false, showCarousel: false, embedInHeader: false, lightbox: true

```

Usage of a caption

You can also set a caption which is positioned underneath the SmoothGallery. To use it you need to fill out the field "Alternative Text". You can also use the field "Align" to position the caption.

Integration into the news

A working example, used at the demo page <http://www.rgspeedmap.com/dev/rgsmoothgallery/smoothgallery-mlt-tl-news.html>

The output is fully configurable with TS. All you need to do insert the following code:

```

plugin-ts_news_rgsmoothgallery < plugin-ts_rgsmoothgallery_jdl

```

Be aware: There should be no <!--##LINK_ITEM##--> was around ##NEWS_IMAGE##! Otherwise you break the gallery in Internet Explorer v 6!

Usage of a caption

Use the field "caption" in the following way: Title & description are separated with the | ("pipe"). So it looks like

```

title 1 | text 1
title 2 | text 2
title 4
title 5 | text 5

```

Change behavior

If you want to change the size or the behavior of the gallery, take a look at the section "Reference", especially at the last entries, there are 2 possible settings which are also used at the demo page:

LIST view

In the list view the thumbnails and the infopane are hidden,

```

TS-CODE
plugin-ts_news_rgsmoothgallery < plugin-ts_rgsmoothgallery_jdl
plugin-ts_news_rgsmoothgallery {
  big-file-mask = 160
  width = 240
  height = 160
  hideInfopane = 1
  showThumb = 0
}

```

SINGLE view

Some values of the list view are overwritten to get a little bit bigger images, thumbnails, the infopane and an slideshow with a duration for every image of 3.5 seconds.

You can see it directly here: <http://www.rgspeedmap.com/dev/rgsmoothgallery/smoothgallery-mlt-tl-news/details/schibg-buddha.html>

```

TS-CODE
plugin-ts_news_rgsmoothgallery < plugin-ts_rgsmoothgallery_jdl
plugin-ts_news_rgsmoothgallery {
  big {
    file-mask = 300
    file-mask = 345
  }
  height = 230
  width = 330
  showThumb = 1
  thumbOpacity = 0.8
  arrows = 1
  hideInfopane = 0
  duration = 3500
}

```

To show the gallery only e.g. in LIST-view but not in SINGLE-view just override the TS in the SINGLE-view.

Plugin settings

The plugin settings are simple and pretty self explaining. Here are all available fields:

1 st tab: Settings	Description:
Mode	The selected mode. Available are "images from a directory", "images from records" and if DAM is installed "images from DAM" and "images from DAM (categories)".
Duration (ms)	If a value is inserted the images automatically change after the given time. Be aware: The value is in ms, not in seconds. So 1 second = 1000
Width / Height of image	The width/height of the large image
Width/Height of gallery	The width/height of the gallery
Path to the directory	If mode is "images from a directory" this is where you add the path to the images.
Startpoint	If mode is "images from records" this is where to select the starting point
Records	If mode is "images from DAM" this is where to select the records.
2nd tab: Advanced Settings	Description:
Use Lightbox	Usage of lightbox if this is active
Use Arrows	Usage of the arrows to the previous/next image if this is active
Use Thumbnails	Usage of the thumbnails if this is active
Use Watermarks	Usage of watermarks for the image in the middle and the lightbox-image.
Limit Images Displayed	Limit the amount of images. It is useful to show just a selection of images. The selection uses "order by rand()" but with a cached output. (So no random images on same images if you reload).
Opacity Thumbnails	The opacity of the thumbnails. Default is 0.2 and allowed values are between 0.00 and 1 (as double type).
Spacing Thumbnails	The spacing between the thumbnails. Default is 10 and allowed values are greater than 1 (as int type).
Hide SideInfobox	Hide the zone which holds the title and the description of an image.
Opacity SideInfobox	The opacity of the SideInfobox. Default is 0.7 and allowed values are between 0.00 and 1 (as double type).
External Thumbnails DIV ID	The id of an div element to insert the thumbnails into it. Please read the section "External Thumbnails".
Advanced configuration	Possibility to configure the SmoothGallery by its possible options. Nothing to do with the TYPO3 extension!

Reference

This is the TS reference but I guess it is much easier to include a slideshow with the cObj RECORDS or CONTENT if you want to it directly

Property:	Data type:	Description:	Default:
mode	string	The mode you wanna run the plugin. Available are DIRECTORY and RECORDS	
duration	int	If you want a timed slideshow	
startpoint	string	The startingpoint with mode = DIRECTORY	
startingpointrecords	string	The startingpoint with mode = RECORDS	
text	string	The description and titles with mode = DIRECTORY	
lightbox	boolean	Usage of Lightbox	
showThumbnails	boolean	Usage of thumbnails	
arrows	boolean	Usage of the arrows	
thumb	IMG_RESOURCE	The size of the thumbnail. Following is default <pre> thumb { thumb = IMG_RESOURCE title-mask = 100 title-mask = 75 } </pre>	
big	IMG_RESOURCE	The size of the big image in the middle. This is automatically overwritten by the value in the flexforms (height,width). Following is default <pre> big { big = IMG_RESOURCE file-mask = 460 file-mask = 345 } </pre>	

Property:	Data type:	Description:	Default:
lightbox	IMG_RESOURCE	The size of the lightbox image lightbox = img_resource lightbox file_max = 1000 file_min = 800 	
pathToMootools	string	Path to mootools.js	EXT_rgsmoothgallery/res/script/s/mootools.js
pathToJdgalleryJS	string	Path to the jd gallery.js	EXT_rgsmoothgallery/res/script/s/jd gallery.js
pathToJdgalleryCSS	string	Path to the jd gallery.css	EXT_rgsmoothgallery/res/script/s/css/jd gallery.js
pathToSlightboxJS	string	Path to the sllightbox.js	EXT_rgsmoothgallery/res/script/s/slightbox.js
pathToSlightboxCSS	string	Path to the sllightbox.css	EXT_rgsmoothgallery/res/script/s/css/slightbox.css
advancedSettings	string	Modify the mode of the gallery by using the values of jdgallery.js. Every wrong character will break the whole gallery. A ' ' at the ends is required	
limitImagesDisplayed	int	Limit the amount of loaded images	
watermarks	boolean	Usage of watermarks. Please read the chapter about it k get more information!	
externalThumbs	string	Id of a div element to insert the thumbnails into it.	
advancedSettings	string	Possibility to configure the SmoothGallery script by its options	
noscript	boolean	If set to 0, the noscript part is not shown. So no output if no 1 javascript is available!	
id	string	It is just needed if you insert 2 galleries on the same page with TS, to differ the 2 galleries.	
hideIdOfPane	boolean	If set to 1, the idpane at the bottom is hidden	0
thumbOpacity	float	The opacity of the thumbnails	
slideInfoZoneOpacity	float	The opacity of the infozone	
thumbSpacing	int	The spacing of the thumbnails	
enableSaveButton	boolean	Enable the Save-Button in the Lightbox	0
enablePrintButton	boolean	Enable the Print-Button in the Lightbox	0

[?ref={plugin:rgsmoothgallery, #1}]

Advanced configuration

External Thumbnails

It is very easy to show the thumbnails of rgsmoothgallery in an external place. An example is here: <http://www.rgspeedlemap.com/dev/rgsmoothgallery/smoothgallery-mlt-external-thumbnails.html> (English) <http://www.rgspeedlemap.com/dev/rgsmoothgallery/smoothgallery-with-external-thumbnails.html>)

All you need is to insert in the field "External Thumbs DIV ID" the id of a div element or to add the id with TS

plugin:rg_smoothgallery_plugin:externalthumbs = ext-thumbnails

ext_id="ext-thumbnails">/div>

To get the output as in the example, you need to include the sample CSS like in this way:

```
page::includeCSS: f116211 = EXT_rgsmoothgallery/res/css/externalThumbs.css
```

New example

There is a new example which makes it even easier because you don't need to create this extra div anymore! There is a demo and the needed configuration online at <http://www.rgspeedlemap.com/dev/rgsmoothgallery/smoothgallery-mlt-external-thumbnails-2.html>

Cropped images

Sometimes it is useful to crop images instead of using the proportions of an image. An example is here: <http://www.rgspeedlemap.com/dev/rgsmoothgallery/smoothgallery-mlt-beschriftungen-hidden.html> (English):

EXT:rgsmoothgallery - 9

<http://www.rgspeedlemap.com/dev/rgsmoothgallery/smoothgallery-with-cropped-images.html>)

The configuration for the samples is:

SmoothGallery I

```
width of Image: 330c*30
height of Image: 330c-25
width of gallery: 330
height of gallery: 330
```

SmoothGallery II

```
width of Image: 430c
height of Image: 160c
width of gallery: 430
height of gallery: 160
```

SmoothGallery III

```
width of Image: 430c
height of Image: 160c
width of gallery: 430
height of gallery: 160
```

More information about cropping can be found in the TSRef: http://typo3.org/documentation/document-library/extensions/doc_core_user/4.1.0/view/522/

Watermarks

If you want to use watermarks on your images you need to activate this feature inside the flexforms or with TypoScript. An example is located here: <http://www.rgspeedlemap.com/dev/rgsmoothgallery/smoothgallery-mlt-wasserzeichen.html> (English)

To configure it, take a look at the static TS (located at ext/rgsmoothgallery/js/static/setup.txt):

```
TS-CODE
plugin.tx_rgsmoothgallery_pi1 {
    cfg = img_watermark
    img {
        border = 0px solid black
        file = 01F9012E8
        XY = (10.w, 10.h)
        10 {
            file_max=60
            file_min=345
        }
        20=TEXT
        20 {
            text.data = date:Y
            text.notWrap = 1 {c} | by somebody |
            align:right
            offset=0 (10.h)-45
            fontSize=10
            fontColor=#ffffff
            backgroundColor=1
        }
    }
}
```

So this code changes the text of the copyright only:

```
plugin.tx_rgsmoothgallery_pi1.cfg.file.20.text.notWrap = 1 {c} | by Georg Ringer |
```

To change the lightbox image, you need to do the same thing with lightboxZ instead of lightbox.

Please be aware: Using this features influences the quality of the image in a bad way. You can see the differences on the example page. You can make the output better with changing jpg_quality in the install tool (Section "All configuration) to 100
[02a] [jpg_quality] = 100

Alternative Layout & Design

It is quite boring to see the same layout over and over and it is very easy to change the layout yourself. The following code and link should serve as an example:

DE: <http://www.rgspeedlemap.com/dev/rgsmoothgallery/smoothgallery-mlt-erweiterten-einstellungen.html>

EN: <http://www.rgspeedlemap.com/dev/rgsmoothgallery/smoothgallery-with-advanced-settings.html>

You just need to change the path to 2 CSS files which come with the latest version of rgsmoothgallery.

EXT:rgsmoothgallery - 10

```

TS-CODE
plugin_tx_rgsmoothgallery_p11 {
  pathToJsGalleryCSS = EXT:rgsmoothgallery/res/css/jsd_galleryColor.css
  pathToJsLightboxCSS = EXT:rgsmoothgallery/res/css/alllightboxColor.css
}

```

Include a gallery with TS only

1st example: A gallery with images out of a directory, changing every 5 seconds, lightbox, arrows and thumbs available and limited to 10 images

```

TS-CODE
lib-randomImage < plugin_tx_rgsmoothgallery_p11
lib-randomImage {
  mode = DIRECTORY
  duration = 5000
  startUpPoint = $libandur/here_are_my_images/
  lightbox = 1
  showThumb = 1
  arrows = 1
  letImagesDisplayed = 10
}

```

2nd example: A gallery displaying images out of records with just arrows to switch to the previous & next image.

```

TS-CODE
lib-randomImage2 < plugin_tx_rgsmoothgallery_p11
lib-randomImage2 {
  mode = DIRECTORY
  # 63 = sid of the page where the records are saved
  startUpPointRecords = 63
  arrows = 1
}

```

!! Be aware: If you insert more than one rgsmoothgallery with TS, you need to add an extra command to differ the 2 galleries. It is not important what you insert as id but it needs to be unique – it can be a number or just a single character.

```

TS-CODE
lib-randomImage < plugin_tx_rgsmoothgallery_p11
lib-randomImage {
  ...
}
lib-randomImage < plugin_tx_rgsmoothgallery_p11
lib-randomImage {
  ...
  id = something
}

```

Fun with stdWrap

Since the version 1.0.10 every parameter can use the functions of the powerful stdWrap! I just want to present 2 examples which seem very nice.

Example 1: Show every FE-User a different gallery

Every FE user which all have a different path, which is in this testcase fileadmin/upload/<username>

The code should be self explaining

```

plugin_tx_rgsmoothgallery_p11 {
  startUpPoint {
    override.data = T3FE:fe_user|user|username
    override.wrap = $libandur/upload/|/
  }
}

```

Example 2: Override a flexform value

The usual approach is that the flexform configuration overrides the TS configuration but it is also possible to override this with TS again. In this example the gallery will change every 4 seconds, no matter what in the flexforms is saved.

```

plugin_tx_rgsmoothgallery_p11 {
  duration {
    override.value = 4000
  }
}

```

FAQ

1. Q: I don't have Imagemagick or GM but I wanna use this wonderful extension. What should I do?

TYPO3

EXT:rgsmoothgallery - 11

- A: If GD2 is available, take the extensions "fb_gd_resize"
- Q: I don't see any images in the frontend. What should I do?
A: 1.) First check the source code for the images which should be in a div like this <div class="imageElement">...</div>. If no images there, you need to add some.
- Q: The path to the images is empty (src="").
A: Check the rights of the files or if Imagemagick is available and installed.
- Q: You can't rename the "Pictures" (German: "Thumbnails")?
A: Do it with TS (Setup):
plugin_tx_rgsmoothgallery_p01_LOCAL_LANG default:txShowCarousel = Pictures
plugin_tx_rgsmoothgallery_p01_LOCAL_LANG de:txShowCarousel = Bilderübersicht
- Q: The links to the previous/next image don't work. What should I do?
A: The given duration (in plugin or TS) is below something like 1000 (ms, which is 1 second).
- Q: The thumbnails hop around as soon as I click on the link to open them. Why?
A: This is a CSS problem. Please check your existing CSS files!
- Q: It takes very long to load the gallery. Why?
A1: At the first call all the images get rendered which can take a while.
A2: Don't add something like 100 images because it will take long and nobody will every click through the images. Take a "real" gallery extension like jm_gallery_sk_simplegallery.....
- Q: How do I get the print/save button?
A: Simply enable the buttons with TS:
plugin_tx_rgsmoothgallery_p01 enableSaveButton = 1
plugin_tx_rgsmoothgallery_p01 enablePrintButton = 1

Known problems

There is currently a problem with pmk_slimbox and rgsmoothgallery both installed and with extensions which use protoype/script aculo.us.

To-Do list

- If you want the extension working inside "Text with image" with DAM images, please find someone who does it because I don't have got the knowledge for it.
- Rating of images (development in progress)
- Comment system for images (development in progress)
- Please tell me.

You like the extension?

If you like this extension, you can do one or more of the following things:

- Write me a mail or create a posting at <http://www.rgsocdeemap.com/dev/rgsmoothgallery.html>
- Please rate the extension in the Repository: <http://typo3.org/extensions/> search for rgsmoothgallery, click on the title and then at "Ratings" (You need to be registered and logged in at typo3.org)
- Donate something, so that I can write those kind of extensions for you. More information is here: German: <http://www.rgsocdeemap.com/terms/pende.html> and English: <http://www.rgsocdeemap.com/en/2/donate.html>. Thanks!

Thanks to

I want to thank the following people

- Jonathan Schemoul for the SmoothGallery. Check out his page: <http://smoothgallery.jonathan.net/showcase/gallery/>
- Jo Hasenau (and the other authors) for the great TYPO3 Cookbook where I took some TS code from.
- All the people who support me, also financially to let me create those extensions in my free time and who followed the vision of TYPO3 "inspiring people to share".

Changelog

Please check out the history online <http://www.rgsocdeemap.com/dev/rgsmoothgallery/history.html> if you are interested. The German version is always up to date and written in English! :)

1.2.0 (4.2.2008)

TYPO3

EXT:rgsmoothgallery - 12

- [Bug] Sorting DAM files
- [Feature] [Easier external thumbnails](#)
- 1.1.4 (25.1.2008)**
- [Bug] small typo in sawelle.php, thanks to Andreas Kretzer
- 1.1.3 (23.1.2008)**
- [Bug] bugfix concerning only usage with DAM and non image-files! thanks to gerards
- [Bug] Change the classname content"
- 1.1.2 (18.1.2008)**
- [Bug] Just a small bug concerning empty directories, thanks Dmitry for providing the patch
- 1.1.1 (7.11.2007)**
- [Bug] with Smoothgallery in "Text w/ img" & Security fix concerning saving/printing an img
- 1.0.10.**
- [Feature] Every config option got its sid/Varp option to make some fancy things. More in the upcoming manual
- [Feature] Suggests Extension 3smooths by Peter Klein for a shared moodol lib. Thanks a lot for sharing Peter!
- [Feature] Split characters can be changed now in the Extension Manager
- [Feature] Print button in lightbox view. Sponsored by "Die Apothekegenossenschaft"
- [Feature] Save button in lightbox view. Sponsored by "Die Apothekegenossenschaft"
- 1.0.9. (release 19.8.2007)**
- [Feature] Small speed improvement: no title & description if the infopane is hidden
- [Feature] tl_news with more than 1 view on one page possible
- [Feature] Better tl_news handling, more configuration with TS
